

Mer & Qt: the solution of choice

David Greaves / lbt

merproject.org

FOSDEM 2013

We're proud of what we've achieved !

... what are we talking about?

Making things

TVs

Cars

Mobile

Tablets

Control/Embedded

mer ... origins :

- Maemo reconstructed '09
- We drank the MeeGo coolaid – and still do !
- MeeGo needed to evolve ... but died
- Mer was reborn

m^er ... vendor focus

mer ... is :

- A core for mobile and smaller devices
- Aimed at device vendors
- Qt / QML
- Quality oriented
- Optimised for speed and size
- Ready to productise

mer ... is a base

- Designed to be 'cross-distribution'-like
- Intended to be forked

mer ... is not :

- A 'user experience'
 - no UI
- A 'hardware adaptation'
 - no kernel, GLES drivers
- Everything including the kitchen sink
 - Mer doesn't have Emacs

The logo for 'mer' features the letters 'm', 'e', and 'r' in a white, sans-serif font. The letter 'e' is replaced by a stylized graphic consisting of a central circle with several smaller circles of varying sizes arranged around it, resembling a molecular structure or a cluster of particles. The background is a dark blue gradient with a bright light source at the top center, creating a lens flare effect.

mer ... delivers :

- Mobile / Nemo, Tablet / Plasma Active & Vivaldi, TV / TVOS (China), Healthcare / Lincor, IVI / Nomovok...
- X86 (not just Atom), ARM, MIPS
- N950/N900/N9 / Spark / STB / ExoPC / RasPi / Panda-beagleboards / Jogger / ...

mēr ... will let you :

- Operate efficiently
 - Deliver quickly
 - Use closed code
 - Innovate
- 

mēr ... will achieve this by :

- Customer focus
- Pragmatic
- Operating entirely in the open
- Being meritocratic
- Inclusive

Sailfish

The word 'Sailfish' is written in a large, white, serif font. To the right of the word is a graphic element consisting of several white, curved lines that sweep upwards and to the right, resembling a stylized sail or a fish's tail. The background is a dark blue gradient with a bright light source at the top center creating a lens flare effect, and several semi-transparent dark blue circles of different sizes are scattered across the scene.

m_er ... because code is not enough

The logo for 'mer' features the letters 'm', 'e', and 'r' in a white, sans-serif font. The letter 'e' is replaced by a stylized circular icon composed of several white dots of varying sizes arranged in a circular pattern.

mer ... provides :

- Code – of course
- Systems – for build, QA, collaboration
- Best practices
- Documentation and support

mer ... contains :

- Build & development
- Base
- Security
- Session
- Hardware
- Connectivity
- Audio
- Graphical
- X11 / Wayland
- Libraries (inc perl + python libs)

Qt

Platform SDK – for non-gui code

- Cross compilation
- Packaging
- Image building
- git and OBS tools

The logo for 'mer' consists of the letters 'm', 'e', and 'r' in a white, lowercase, sans-serif font. The letter 'e' is replaced by a stylized circular graphic composed of several white dots of varying sizes arranged in a circular pattern.

mer ... systems :

- OBS
 - Upstream patches
 - Integration with sb2
- BOSS
 - Business process automation by Ruote
- Scratchbox2
 - Next generation cross-building

mer ... systems :

- IMG / mic
 - Automated image builds
- Bugzilla
 - Or <insert your choice here>
- Gerrit
 - Or <insert your choice here>
- Futures....
 - Package DB for license tracking

... project areas to maintain

- Core
- Tools
- MINT
- Nemo
 - UX
 - Middleware
 - Hardware Adaptations

HELP

mer ... SDK

Mer SDK

Sailfish 

mer ... getting started

- 1 or 2 engineers
- Hardware Adaptation
- Graphics Adaptation
- Platform SDK

See Mer documentation

The logo for 'mer' consists of the letters 'm', 'e', and 'r' in a white, sans-serif font. The letter 'e' is replaced by a stylized circular icon composed of several white dots of varying sizes arranged in a circular pattern.

mer ... prototyping phase

- Internal git, OBS, image builder and bug tracker
- Preliminary automation
- Minimal team and project setup
- QML applications

mer ... getting serious

- Upstream tracking best practice
- QA solutions and CI – especially inter-team or with subcontractors
- “Day/week/cycle in the life of a Vendor” docs
- Infrastructure needs

The logo for 'mer' is located in the top left corner. It features the letters 'm', 'e', and 'r' in a white, sans-serif font. The letter 'e' is replaced by a stylized circular icon composed of several smaller white dots of varying sizes arranged in a circular pattern.

mer ... in production

- Scale up internal systems
- Extend automation and QA
- Verify core requirements for release

mer ... needs you

- Not so much a 'vendor community'
 - More a 'co-operative'
- You ARE expected to contribute back
 - grants influence via the governance model

mer ... needs you

- We're a young distro
- We have a lot to learn - as well as a lot to offer

“The Smartphone Disruptors In 2013 Will Be Mozilla/Firefox, Jolla/Sailfish, and Ubuntu Mobile” - Forbes 2013

- Come and make a difference!

Mer & Qt: the solution of choice

David Greaves / lbt

merproject.org

FOSDEM 2013

Work for Jolla – they pay me to work on OSS projects

Talk about Mer and Qt

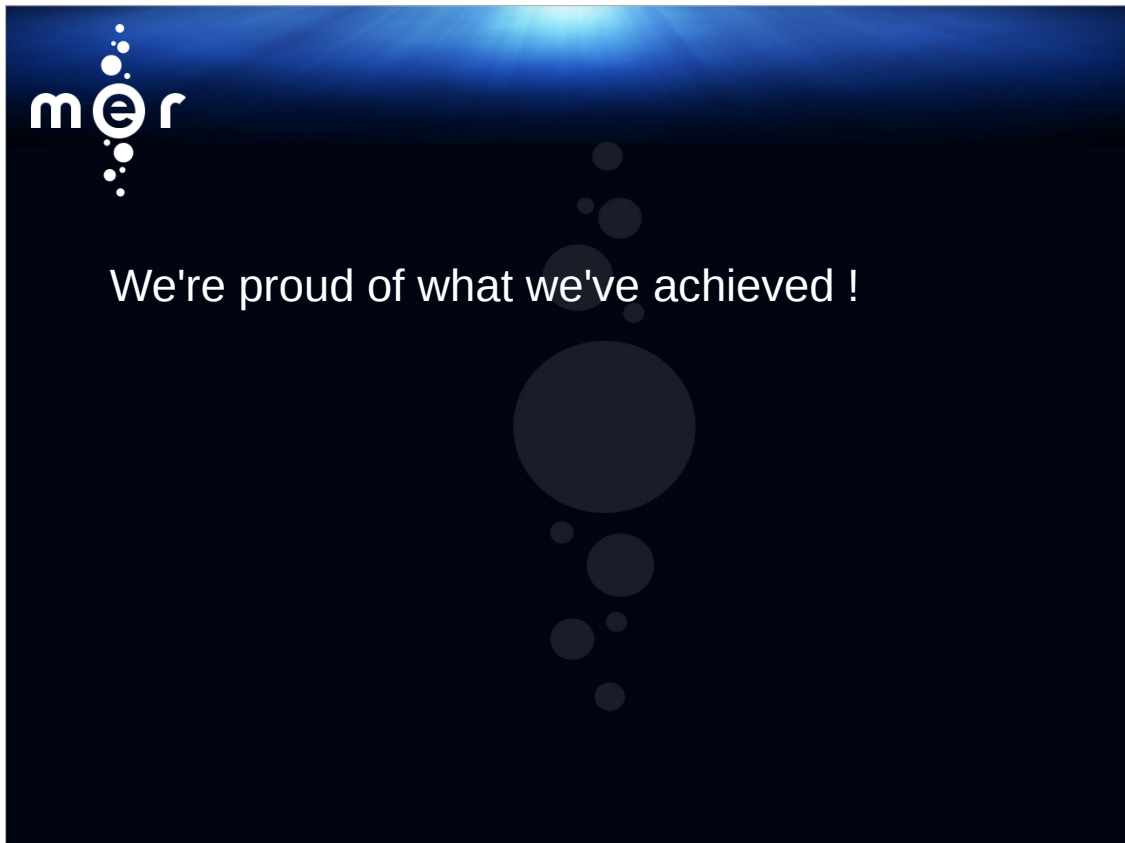

Why in the Cross-distro room?

You've heard about tools and collaboration

More of the same

We're looking to make life easy for vendors

Mer is both an upstream and a downstream

Jolla / Sailfish is the first mobile device

Vivaldi the first tablet

Chinese vendor making TV STB

Healthcare

We're proud of what's been done.

Now we want more people to do it.

mer ... what are we talking about?

Making things

TVs

Cars

Mobile

Tablets

Control/Embedded

Making stuff – Phones - -sure
Tablets, TVs, Cars

Qt has a good line in fridges?

Anything: when you have hardware like this: RasPi
at the \$35 price point : RETAIL

Innovation starts to become real

Moving into embedded space

mer ... origins :

- Maemo reconstructed '09
- We drank the MeeGo coolaid – and still do !
- MeeGo needed to evolve ... but died
- Mer was reborn

Maemo – around 09

Mer was launched - Carsten started a project to open up Maemo. We got somewhere; various tablets etc

Moblin (some gtk framework in C... v. odd)

MeeGo - rpm based ! Who cares.

The vision was right - connected devices, open, technocracy

However....

Implementation sucked : the big players put a lot of money in which did push the code forward but... very problematic.

And then ... things changed : Elop Feb 11

Looked at the MeeGo proposition

Suggested a new focus – vendors

Unknown to us Intel were kinda busy on Samsung

Tizen happened – we did it anyway

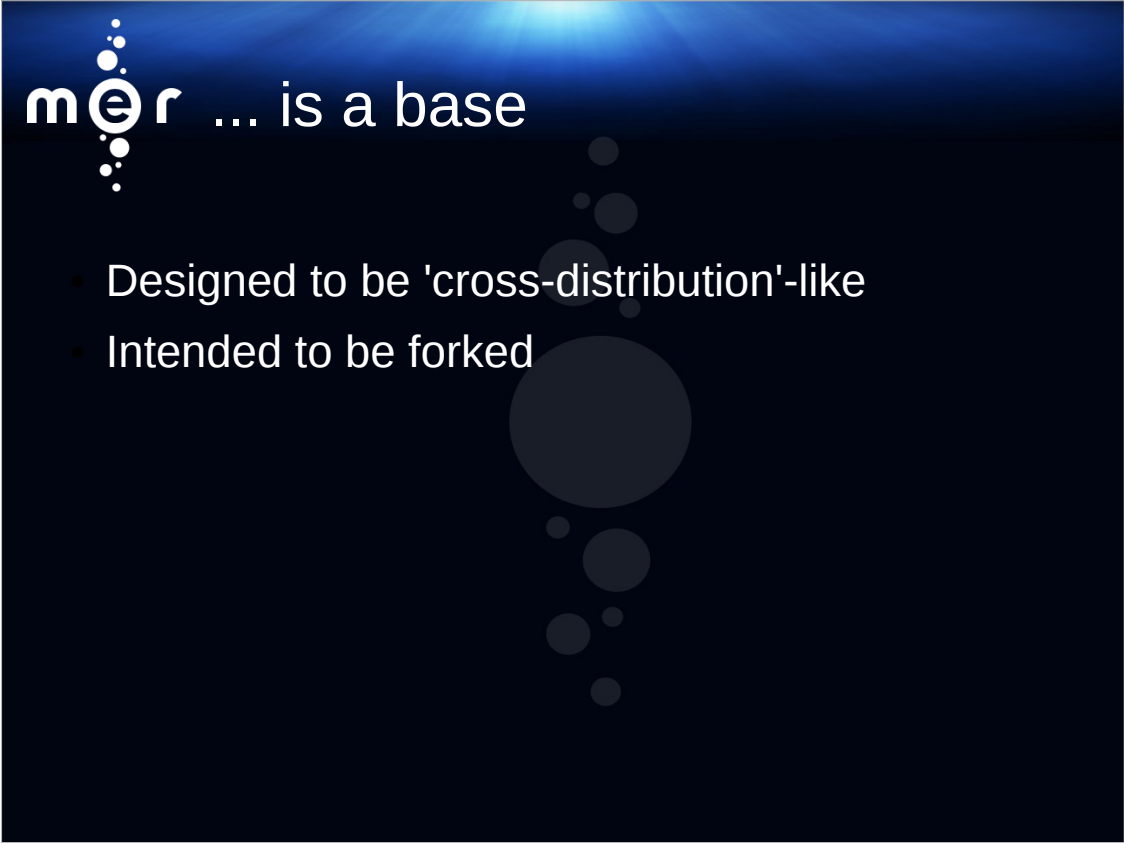

mer ... is :

- A core for mobile and smaller devices
- Aimed at device vendors
- Qt / QML
- Quality oriented
- Optimised for speed and size
- Ready to productise

Reasonable success at attracting vendor interest – the MeeGo concept really was rather good.

Quality is an important part of Mer – automated processes allow use of various test approaches

We want to see small businesses take a device and be able to use Mer to make a simple product specific UX

mer ... is a base

- Designed to be 'cross-distribution'-like
- Intended to be forked

Now we're getting to cross-distro feeling:

 ... is not :

- A 'user experience'
 - no UI
- A 'hardware adaptation'
 - no kernel, GLES drivers
- Everything including the kitchen sink
 - <shock>Mer doesn't have Emacs</shock>

Not really true, we do have a UX – it's a splash screen that exercises GLES.

Getting down to 330 packages
Cf MeeGo at ~1500 and Debian where we need a new numbering system

You don't get many choices

Mer:Tools has emacs

 ... delivers :

- Mobile / Nemo, Tablet / Plasma Active & Vivaldi, TV / TVOS (China), Healthcare / Lincor, IVI / Nomovok...
- X86 (not just Atom), ARM, MIPS
- N950/N900/N9 / Spark / STB / ExoPC / RasPi / Panda-beagleboards / Joggler / ...

A variety of Uxes from different teams

... will let you :

- Operate efficiently
- Deliver quickly
- Use closed code
- Innovate

'You' is not us in this room – unless we have some CEOs...

We should care about this – we want CEOs to select this tech and that means a business case.

And that means our salaries

Also – most of this this; it's taking out the tedium.
More time for interesting problems

... will achieve this by :

- Customer focus
- Pragmatic
- Operating entirely in the open
- Being meritocratic
- Inclusive

The former is obvious

The latter is how we plan to retain our integrity.

Jolla have formed SailfishOS and plan a commercial ecosystem around it.

Mer and the tools and systems are a key element of that ecosystem.

We're an open source project.

A lot like the Qt project has ICS and Digia, KDAB and so many others around it.

Mentioned tools/systems...

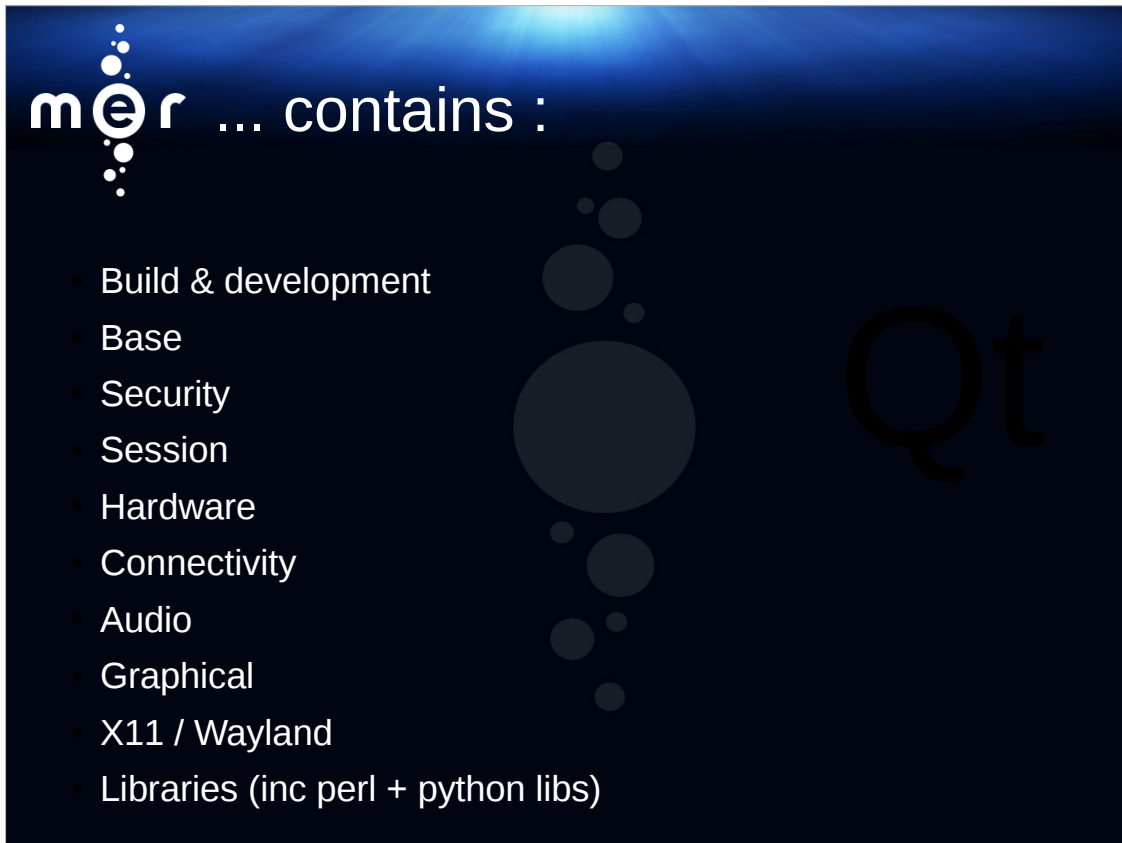

m_er ... because code is not enough

mer ... provides :

- Code – of course
- Systems – for build, QA, collaboration
- Best practices
- Documentation and support

Code is massively important

We have lots of it !

Main API is expected to be Qt/QML

Don't care what you do on top of it :)

Platform SDK – for non-gui code

- Cross compilation
- Packaging
- Image building
- git and OBS tools

If you're writing code you need this

We started with something we use for the core

Nothing fancy – big chroot :)

Lets you do basic maintainer tasks

mer ... systems :

- OBS
 - Upstream patches
 - Integration with sb2
- BOSS
 - Business process automation by Ruote
- Scratchbox2
 - Next generation cross-building

OBS – dependency based

Opensuse's open build system

We've done quite a bit of work on this

It builds the same code for different distros

Can't believe there's not 3 talks on this!

Business process

Ruby

Proper business processes

AMQP – distributed workflow

Participants – anything amqp/json

Eg request to cmit, create obs project, build with all dependencies, all OK? Build an image, OK? Boot image on HW/VM, OK? Run tests, OK? Commit.

Cross compiling

Not sb1. Path subst based. Transparent + clean.

Supports complex acceleration

... systems :

- IMG / mic
 - Automated image builds
- Bugzilla
 - Or <insert your choice here>
- Gerrit
 - Or <insert your choice here>
- Futures....
 - Package DB for license tracking

Need to build images – mic

Django webapp with nested kvm workers, driven by BOSS... “Image Me Give”

Work with any other systems where a human would normally need to 'do something'

These are the project areas

Each has a focus

Different src storage styles

Core : tarballs in git (necessity)

Tools: mishmash – moving to git-pkg

MINT: systems : supports Suse and Debian

Use OBS so welcome to add more distros

Nemo: Mainly external git + tarballs

Possibly moving to gitpkg when it's easier

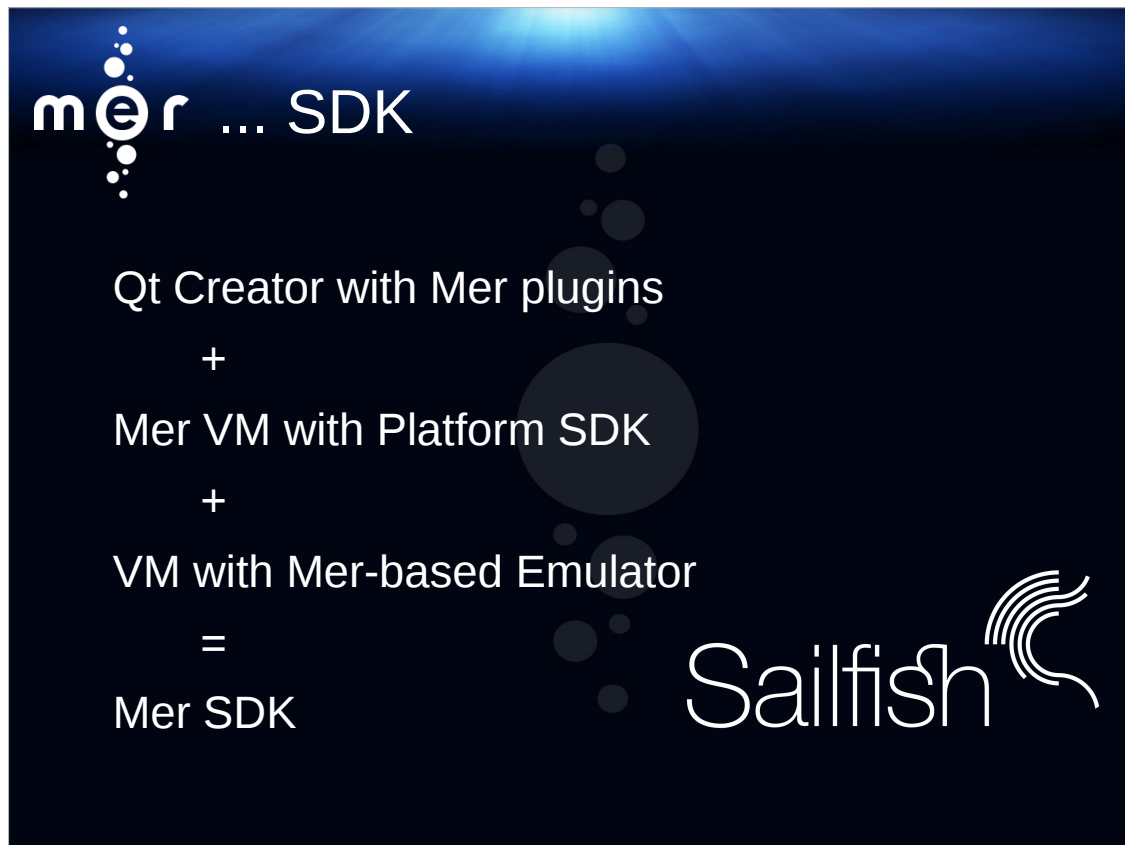

Need to look at rpm-buildpackage

Also need to handle security updates and upstream tracking – may steal debian system?

Mentioned SDK – platform...

But we've also got Qt and gui apps ... soo....

QtC: Sponsored by Jolla as part of their SailfishOS

Platform SDK:

Mer Core + Tools

SB2 cross-compilers

Image building tools: mic & kickstart handlers

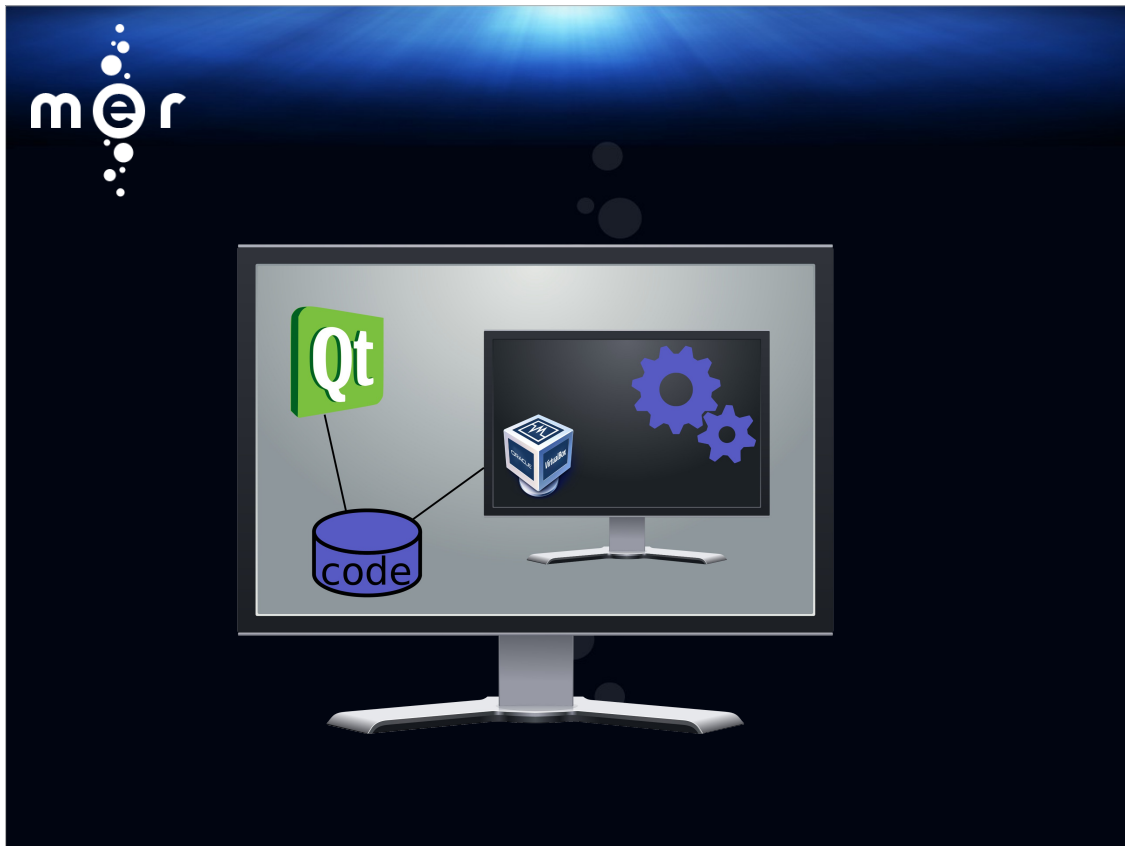

OBS tools: osc, specify

Emulator is Mer-based with UI + VM adaptation

Debug tools: latrace, powertop, valgrind

Testing tools: testrunner

Show QtC :

Explain

code share
compile
ssh
Package
deploy

... getting started

- 1 or 2 engineers
- Hardware Adaptation
- Graphics Adaptation
- Platform SDK

See Mer documentation

Anyone

We're aimed at vendors but encourage users

... prototyping phase

- Internal git, OBS, image builder and bug tracker
- Preliminary automation
- Minimal team and project setup
- QML applications

... getting serious

- Upstream tracking best practice
- QA solutions and CI – especially inter-team or with subcontractors
- “Day/week/cycle in the life of a Vendor” docs
